Additional notes:

R.F.I Shielded ventilation panels are manufactured using aluminum honeycomb retained in an extruded aluminum frame. These are screw fixed to the enclosure with a conductive gasket making the R.F. Bond.

Dependent upon the application shielded windows are produced either by sandwiching fine metallic mesh between 2 pieces of glass or polycarbonate, or by a metallic coating on one side of the glass. To obtain the best R.F. performance it is important to keep the window size to a minimum.
